

### **ASSIGNMENT**

Your online data is very valuable to cybercriminals. So, what can you do to stay safe? List at least 5 simple strategies that you can use to protect your personal devices and maintain your data securely.

My 5 simple strategies to protect my personal devices such as phone, tablet, laptop, or any to maintain my data securely is to provide using extreme password with having upper, lower case, number, special char, and emoji char will make it impossible to decode it.

- use encryption or stored as hashed password on the files to keep your data safe
- Allowing 2nd factor authentication, and some biometrics on your phone
- Always be attentive on what you're clicking on the site check if its legit.
- Never open attachments in spam emails.
- Lasty is better always do keep logout rather than hanging it around.
